KITCHEN DISPLAY SYSTEM

Powered by **NCC**

KITCHEN DISPLAY SYSTEMS (KDS)

INPUT FLEXIBILITIES

With a variety of hardware options that include bump bars or touchscreen offerings, you'll be able to select the input method that works best for you.

IMPROVE ORDER ACCURACY

Digital automation will optimize your kitchen processes, from reducing human error, to lost or illegible tickets. With timers and movement through the kitchen, you'll see an increase in table turnover and increase your bottom line.

WORKFLOW AUTOMATION

Through the customization options, menu items and modifiers can be color-coded to identify special prep instructions, as well as order types and times. Automatic timers and alerts help push orders through the kitchen and queue to hasten the speed of service.

KDS PRINTING

Our software lets you print tickets and labels directly from the KDS solution. Perfect for to-go packaging or QSRs needing to track orders being prepped in different containers or stations.

Reflection POS Kitchen Display System (KDS) is a tool that easily connects your front of house and kitchen. Streamline your workflow by digitally sending orders to the kitchen for immediate review and fulfillment.

Eliminate the need to rely on paper tickets which can easily be lost or rendered illegible. Your KDS will become the hub of restaurant operations, digitally moving orders from the point of sale (POS) system to your visible kitchen display screen. Your KDS will automatically show orders with modifications and feature a timer so kitchen staff can keep track of the order and time spent on it.

A KDS will increase revenue and enhance employee performance with this crucial restaurant automation technology.

ADVANCED KDS LABEL PRINTING

Thanks to its advanced direct label printing, the Reflection POS KDS software is perfect for restaurants with high takeout and delivery order rates. Printing tickets using sticky labels to track and handle orders efficiently is a popular way of managing to-go orders.

With continuous print feed to sticky label printers, you can effortlessly track and handle orders without any slowdowns in the kitchen. The software automatically populates orders placed through third-party delivery sites into your KDS, allowing easy color coding to prioritize takeout or in-house orders.

Different departments within the establishment might require separate ticket and label printing at different times. Our solution addresses this need by providing the flexibility to cater to multiple departments. Moreover, the KDS screen seamlessly integrates with the POS system settings, making it easy to manage and customize as needed. All printing settings can be conveniently controlled through the KDS settings.
