

BAR & NIGHTCLUB

INCREASE PRODUCTIVITY

- Send orders directly to bartenders from order-at-the-table devices to a printer or KDS system.
- Streamline ordering and service to help staff serve customers more quickly.
- Simplify age verification processes with ID scanning and reporting.

ENHANCE CUSTOMER EXPERIENCES

- Deliver convenient, accurate service with order- and pay-at-the-table devices.
- Accept all popular payment methods, pre-authorize tabs, and split or combine checks to optimize transactions.
- Streamlined operations that allow servers to provide faster, friendlier service.

MAXIMIZE THE BOTTOM LINE

- Reduce shrinkage with accurate inventory data, limits on comps and discounts, and informed ordering decisions.
- Analyze data to forecast peak and slower times so you can schedule the right number of employees in the right roles.
- Use data to see which drinks are profitable and which are not to help you maximize margin.

WE UNDERSTAND YOUR BUSINESS & HAVE THE RIGHT POS SOLUTION FOR YOU

Our bar and nightclub point of sale (POS) solution gives you proven tools to keep customers happy and margins at the max. With our system, you can streamline transactions, even when preauthorizing a tab or splitting a check. You can also accept all popular payment methods, even contactless card and mobile wallet payments, at the table. But our POS system does more. Our Reflection POS system gives you visibility into inventory, lets you easily manage staff, and saves time on back-office tasks. Drink order accuracy, operational efficiency, and effective scheduling can be the difference between profitability and losses. Reflection POS gives you the foundation for building business success.

WHY REFLECTION POS

Reflection POS® is different from other point of sale systems. It's easy to use, but it has the most sophisticated network available. It uses embedded software in terminals, rather than software that you access through the internet. Each POS terminal captures and shares data with all other terminals, with no human effort required. So, if service is disrupted, terminals can keep working and then share data when the network is up and running again. Plus, this model means your Reflection POS system isn't vulnerable to malware or cyberattacks.

More than 50,000 systems in 35 countries around the world demonstrate each day the power of Reflection POS. It's reliable and secure while giving you the ability to operate efficiently and provide the best possible customer experiences.

CERTIFICATIONS

Reflection POS® uses a validated semi-integrated architecture to ensure card data is captured directly by the PCI-approved payment terminal

Reflection POS® has been validated by National Weights and Measures to meet requirements for integrated electronic scales

FEATURES

- Graphical Table Management
- EMV/Credit/Debit/EBT/Gift Cards
- Bar Tabs with Credit Pre-Auth
- Happy Hour/Promo Pricing
- Prep Instructions
- Beverage Enforcement
- Age Verification
- Split Item/Split Check
- Combine Check
