

THRIFT STORE & CONSIGNMENT SHOP

INCREASE PRODUCTIVITY

- Manage donations and merchandise with advanced inventory management.
- Modernize data collection with barcode scanners that automatically update the store management system.
- Upgrade intake operations and shipments to recycling with scales for fast, accurate transactions.

ENHANCE CUSTOMER EXPERIENCES

- Launch a loyalty program that encourages donations and keeps customers coming back to use rewards on future purchases.
- Allow customers to use the payment method they prefer with seamless integration with top credit card processors.
- Use POS system data to understand your customers better and provide the products and services they want.

MAXIMIZE THE BOTTOM LINE

- Design and execute promotions that increase donations and store traffic while protecting margin.
- Access reports that let you see which products are in demand and donors to engage to keep them coming in.
- Manage from the back office or on a mobile device to optimize employee schedules, production, pricing, and promotions.

WE KNOW WHAT MAKES THRIFT STORES WORK

Our proven thrift store point of sale (POS) systems help resale stores, consignment shops, and secondhand stores across the country run every day. With Reflection POS®, your thrift store can manage donations, build loyalty, track inventory, and run promotions, all from a single system. It helps you save time during intake, production, and at the checkout counter. You can even use our system to build your own “supply chain,” rewarding donors and engaging with them to keep items coming in. Our proven system also helps you delight shoppers with professionally labeled items, shelf labels, and fast, frictionless checkout.

WHY REFLECTION POS

Reflection POS® is different from other point of sale systems. It's easy to use, but it has the most sophisticated network available. It uses embedded software in terminals, rather than software that you access through the internet. Each POS terminal captures and shares data with all other terminals, with no human effort required. So, if service is disrupted, terminals can keep working and then share data when the network is up and running again. Plus, this model means your Reflection POS® system isn't vulnerable to malware or cyberattacks.

More than 50,000 systems in 35 countries around the world demonstrate each day the power of Reflection POS®. It's reliable and secure while giving you the ability to operate efficiently and provide the best possible customer experiences.

CERTIFICATIONS

Reflection POS® uses a validated semi-integrated architecture to ensure card data is captured directly by the PCI-approved payment terminal

Reflection POS® has been validated by National Weights and Measures to meet requirements for integrated electronic scales
