

LIQUOR STORE

INCREASE PRODUCTIVITY

- Use barcode scanners to increase inventory accuracy and improve stocking.
- Streamline ordering and avoid stockouts of popular items.
- Simplify age verification processes with ID scanning and reporting.

ENHANCE CUSTOMER EXPERIENCES

- Assist customers by accessing inventory information on mobile devices.
- Accept all popular payment methods, including integrated card and contactless payments.
- Reduce wait times with fast checkout, including quick age verification processes.

MAXIMIZE THE BOTTOM LINE

- Role-based access and audit trails of sales and voids to reduce shrinkage
- Daily sales reports and product performance data to inform purchasing and merchandising
- Use data to learn which promotions result in the most store traffic and the highest revenues and margin.

GIVE YOUR BUSINESS THE BENEFIT OF A PROVEN LIQUOR STORE POS SYSTEM

Liquor store success depends on a few key operational and managerial features: item-level inventory control, minimal shrinkage, and time-saving processes that also make sure each customer receives exceptional service. Our liquor store point of sale (POS) system showcases the features you need to manage all parts of your business. With Reflection POS®, liquor stores can keep lines short with fast transactions, including quick and secure age verification for compliance and to avoid fines. You can accept all the payment methods your customers want to use, including contactless and mobile wallet payments. Our POS system also gives you centralized control of your inventory by the case, six-pack, or bottle. You can easily update pricing and conveniently pull reports across all locations when you need them, whether you're working in your office or remotely.

WHY REFLECTION POS

Reflection POS® is different from other point of sale systems. It's easy to use, while simultaneously having the most sophisticated network available. It uses embedded software in terminals, rather than software that you access through the internet. This provides the ability for each POS terminal to capture and share data with all other terminals, with no human effort required. This means if your internet service is disrupted, terminals will continue independently and then automatically reconnect and share data when the network is up and running again. Plus, with embedded Reflection POS® your system isn't vulnerable to malware or cyberattacks.

More than 50,000 systems in nearly 40 countries around the world demonstrate each day the power of Reflection POS. It's reliable and secure while giving you the ability to operate your Liquor Store efficiently and provide excellent customer experiences.

CERTIFICATIONS

Reflection POS® uses a validated semi-integrated architecture to ensure card data is captured directly by the PCI-approved payment terminal

Reflection POS® has been validated by National Weights and Measures to meet requirements for integrated electronic scales

FEATURES
